ARDUBICE IV

- Main city streets
- cycling infrastructure
- Railway
- railway station
- public transports station

- Q20
- Q100

The Q100 (100-year flood - red): Indicates the largest projected flood area with the lowest probability of occurrence (once every 100 years). Key factor for building permits, and the Q20 floodplain in Pardubice is an area at risk of a 20-year flood (with a 5% annual probability of occurrence), which is marked in dark blue on flood maps. This threshold discharge is determined by the overflow of the Elbe and Chrudimka rivers, and the detailed maps include areas such as Staré Čvice, Semtín, and Svítkov.
